

2serve

made to serve.

How does RONA glassworks, a manufacturer of global prominence, approach the catering sector? The answer is easy: full on!

At RONA, not only have we separated product design and manufacturing for products used in the hospitality sector from products for domestic use, but we also decided to deal with the entire catering sector as it really is – with all its specific quirks, attention to detail, special demands of the hospitality world, and the needs of our partners, with whom we are destined, through the rules of catering, to live not simply in a supplier–customer relationship but a symbiotic, mutually beneficial long-term partnership. This is how, more than 20 years ago, the concept of a professional crystalline range made specifically for the catering sector was born at RONA. It soon became a unique project at the company, and we coined it “RONA TO SERVE”. Importantly, the complete professional range is continuously available from a large logistics centre in user-friendly quantities and sample shipments. Naturally, we also guarantee subsequent availability of goods for up to two years after their retirement from the standard range. Uncompromising quality, professional logistics services and partner care are imperative for us. This is why each of RONA’s products designed for tables in hotels and restaurants bears our proud signature, the RONA 2SERVE logo, which is indelibly etched with a laser.

5 star glass made to serve.

resistance test

scan and play video

laser treated rims

- resistance to chipping increased by 50% against standard rim finishing
- higher resistance against impact, less breakage

functional and elegant form

- professional design meets the highest criteria of the international hospitality industry
- elegant and functional designs offer the right glass for every occasion and purpose
- glassware designed to fit most widely used dishwashing racks

brilliance and clarity

- the high quality of crystalline guarantees permanent brilliance and clarity
- neutral shade of the glass mirrors the original colour of the beverage
- timeless clear transparency is guaranteed by using the highest quality purifiers such as erbium

dishwasher safe

- guaranteed permanent brilliance and clarity after 1,000 washing cycles according to EU standard EN 12875
- long term tests provided resistance to common detergents
 - suitable for washing in commonly used plastic racks
 - flat footplates do not retain water after dishwashing
- thermo-shock resistance for temperature difference of 65°C

progressive production technology – pulled stem

- upgraded resistance during dishwashing and manual drying
 - seamless stem makes the contact with glass pleasing
 - joint-less transition from cup to stem provides extreme resistance to breakage
 - the glass is resilient, although remains flexible
 - extremely hard surface proven according to the Vickers' method

2serve

exceptional performance.

machine-crafted drinking glassware, stemmed glasses, and tumblers

Over time, RONA 2SERVE machine-made drinking glassware has set the standard in the catering industry. Elegant, modern-designed stemmed glasses are made of the highest quality crystal with drawn-stem technology, i.e. virtually from a single piece of glass. The world's most advanced technology, this gives the glasses made at our glassworks unique fracture resistance and elastic flexibility, essential qualities for glass exposed to extreme use at hotels and restaurants. In the final stage of production, we laser the rims of already perfected products, whether stemmed glasses or tumblers, with a 20,000 °C (36,000 °F) beam to eliminate the risk of that otherwise frequent flaw of drinking glassware – chipping.

All our partners will find items that fully satisfy their requirements and planned usage from our range of mechanically-crafted RONA 2SERVE glasses specifically developed and made for use in catering. Our range of our glasses is unusually extensive, starting with ultra-light glasses from the Linea Umana professional tasting suite, which are thinner and lighter than hand-crafted products, and ending with heavyduty sets such as Edition or Image, which are exceptionally durable. For each series of stemmed glasses, we also offer a suitable complementary set of durable and high-quality tumblers.

The DIVERTO collection is an innovative approach to a professional product line of ultra-light glasses. Combining classic and modern design styles in one line is not only progressive and logical but also allows the user the opportunity to be creative on their tablescape. As the line grows, it will continue to be interactive.

Edge stemware is designed specifically for the innovative leaders in the hospitality market. The light weight, one piece construction exudes elegance yet unprecedented chip resistance due to the laser treated rim. The suite features the most popular sizes needed for the hospitality market with a stunning, eye catching slant cut martini glass. The stone fruit liqueur glass captures the precise size and capacity that the top mixologists are searching for and is perfect for serving trendy liqueurs or digestives. Design, technology, and execution, all at its best, all the cutting edge.

A must-have for any contemporary property. This square-shaped collection, robust yet elegant, will please any customer with its well-balanced construction and natural self-assured feeling. Carefully designed cups allow the beverage to develop to its full richness while the stable footplate balances the glass to perfection. The geometrical shape is designed in a way providing the best protection against breakage or chipping. A great choice for any stylish property.

Le Vin is a collection made for wine degustation at its best; a grape variety specific suite that stands out from the rest of the RONA professional assortment through its lightweight thin walled execution which enhances the special feeling of this unique suite, offering an extra perceived value. Even if this glass range is made with specifically thin walls, its chipping resistance is fully maintained owing to the laser treatment of the lip-friendly mouth rim. Le Vin makes any wine tasting a special event.

Tall and beautiful, Select can be an adornment to any festive table. You would not use Select for every occasion but any special event also needs a correspondingly special glass. Regardless of its size, the Select glasses are as close in quality to handmade production as you can get with the machine made production. Not every manufacturer can make glasses so tall like RONA with their machinery, but we can take advantage of RONA's ability to do so and offer our clients an exceptional product at a reasonable price.

Banqueting range at its best. Short stems and slightly wider footplates predestined this suite as the RONA banquet solution for glassware. Reasonably sized cups of classic design are topped by a 37 cl / 12.5 oz. glass specifically designed for serving drinks with ice cubes. The straight-sided design of this glass enables the easy placement of one next to other and the safe dispersing of ice cubes from a bucket. Optima is a good choice for any garden party too.

The shape of the Eclipse set has been inspired by efforts to achieve the effect of concentrating the aroma of a drink in the area around the lip. The conical shape allows the bouquet in the lower part of the glass to be released and intensify in the upper part. This is particularly covetable for beverages such as craft beer, delicate cocktails, and of course, noble still waters. The modern, uncompromising design can accentuate selected drinks on a well-set table.

Solid, sturdy, massive with a great feel in your hand, these are the characteristics of the Solar tumbler suite, the newest offering in the RONA professional tumbler lines. Holding any of these robust glasses in your hand evokes peaceful and relaxed evenings spent with a good drink and good friends. Enjoy the precious, confident feeling only the Solar collection can offer.

An ability to offer a classic cylindrical set of tumblers is an obligation for every serious glass manufacturer in the hospitality industry. RONA covers the whole range with its Lunar suite, so popular all around the world. Like all RONA tumblers, Stellar is made with flat bottoms which do not retain water after dishwashing.

Originally designed as a stemless option for wine glasses the Wine Solution collection quickly proved that it would be unwise to limit this unusual set of glasses to only this purpose. The growing popularity of this avant-garde set of thin walled tumblers shows that its utilization may be much wider. Its concave bottom is not only convenient for holding the glass in your hand but also helps wine to breathe during pouring and drinking. The fine, faceted lip-friendly rim can bring your joy from good wine to perfection.

“ Our restaurant, The Kitchen Table, is located on the Kentucky Bourbon Trail. When opening our restaurant, we wanted pieces that were upscale and comfortable, pieces that would highlight the nature of the bourbon trail. The RONA products we selected are the perfect balance between high-end quality and comfort. The elegant design and craftsmanship of RONA glassware elevates the dining experience for our customers, and we couldn’t be happier with the quality of their products. ”

Brian Landry, Chef/Owner QED Hospitality

The Kitchen Table
Clermont, KY, USA

“ RONA has been part of our glassware collection for some time now. For us, aesthetics and practicality are essential for the choice of our suppliers and I must say that RONA fully reflects this combination. The glasses are very beautiful, functional, easy to handle, and often arouse amazement in the customer. Another very important note is the excellent value for money. The catalog is diversified and suitable for all types of restaurants. My favorite line remains Linea Umana. ”

Francesco Cioria, Head Sommelier

supremely artisan.

hand-crafted drinking glassware, stemmed glasses, and tumblers

RONA is one of a handful of glassworks in the world that can offer a comprehensive range of exceptionally high-quality crystalline products made using not only the latest machine technology but also original techniques for hand-shaped glass. In this way, RONA maintains and cultivates the traditional art of handmade glassware, drawing on more than a century of history and many years of expertise. Despite or perhaps precisely because of, the traditional roots of this exclusive production method, RONA manages to maintain a handmade range of the finest quality that is very modern, fresh and contemporary.

Glass products made with the touch of a human hand have always played an important and unique role in the catering industry, especially at the higher end, where demanding customers rightly expect sophisticated perfection. In order to serve this elite market to the highest possible standard, RONA has prepared a range of exclusive products just for the catering market, which you can find in this catalogue.

Santorini is a mystical island that many say is the remains of the legendary Atlantis. It is one of the islands of the Cyclades archipelago, where, according to legend, the goddess Artemis and her brother Apollo were born. Hence their name: the Greek Cyclades, translated as "islands in a circle". It would be difficult to find a more suitable name for this delicate hand-shaped suite. The lower part of the stemmed glasses takes the shape of a volcanic caldera so that drinks, and wine in particular, can unlock their full potential.

Unlike most of RONA's competitors, we still maintain a wide selection of handmade products and the Sensual collection can answer the question why. The extremely thin execution of so called "muslin quality" in combination with the demanding shape of this line makes it impossible to be reproduced by machine. Although Sensual will never replace more durable and affordable machine made product there are moments in life when you want to hold just this extraordinary glass.

The refined and sophisticated design of this hand-made suite will acquire your attention with no way back. Its bold, up-to-date curves reflect current trends in fashion. An almost ethereal design, slim stems and extremely thin glass. The appealing and slightly extravagant shapes exude easiness and enjoyment on the table.

Uniquely shaped and fully hand crafted, RONA offers a wide range of these free formed carafes specially designed for exclusive occasions. Each of these unusual shapes is designed to develop any wine to its peak potential.

“ Our restaurant provides first-class drinks and cuisine, aiming to promote a culture of wine pairing. You should know that there are not many such restaurants in China at present, so I have spent a lot of time selecting suitable wine glasses. A professional and high-quality wine glass can help customers better experience our wine and leave a deep impression from our restaurant. I am delighted to meet RONA, as its wine glass meets all my expectations for a professional wine glass. More importantly, its appearance and practicality are deeply loved by my customers. ”

Cassie Hu, Restaurant manager

“ As a sommelier with Slovakian roots, the wonderful glasses from RONA embody a piece of my home and stand for excellent quality and exquisite style. So I am particularly pleased to be able to use the glasses in our gourmet restaurant Solo Du in the Kulturhof Stanggass, which has just been awarded a Michelin star, to serve our guests fine wines in stylish RONA glasses to accompany the gourmet menu of our chef Zsolt Fodor. ”

Martin Bielik - Maître & Sommelier

Kulturhof Stanggass
Bischofswiesen, Bavaria, Germany

urban nightlife.

bar glassware, mixology

As the profile of mixology and bar culture climbs ever higher, glassware specifically designed for bars is becoming increasingly more important in the RONA 2SERVE hospitality glass range. We believe that this specific environment requires its own distinctive set of products that will allow this trend to develop to the full. The RONA 2SERVE range for bars and mixologists includes a glass especially developed for single malt whiskey, a mixer and a set of Cumberland tumblers decorated with a polished cut (which are poorly imitated by the cheap pressed products we still, sadly, come across so often in this exceptional setting).

A privileged place is reserved for these products on the most luxuriously laid tables.

Beer. An ancient companion of humankind since the dawn of time, bringing joy and quenching thirsts of both poor peasants and majestic kings. With the growing number of craft breweries offering high quality beers, RONA believes that this cultural and iconic beverage deserves similar attention to wine, with shapes designed for each type of beer from Ales to Stouts and everything in-between.

Every bar has slightly different requirements when it comes down to glassware but the general range of product is quite universal across the industry. The RONA bar selection brings some ideas reflecting the most commonly used glasses in the bar industry.

“ Over the years RONA glassware has become a staple in my restaurant, truly a backyard gem for Western PA restaurants - you can't have sexy food without sexy glassware! ”

Drew Garbarino - Chef/Owner

Twisted Frenchman
Pittsburgh, PA, United States

“ We have received compliments on the design and handling of the Linea Umana still and sparkling water glasses. For the wine glasses we have received very good feedback for the quality of the glass and the lightness especially in the Orange Wine 460 ml and Champagne 500 ml models of the Linea Umana and Medea red wine glass. ”

Giacomo Girolami - Director of Restaurants

San Domenico Palace, Four Seasons Hotel
Taormina, Italy

the art of presentation.

pitchers and carafes

Enjoy a privileged status in the hospitality range of every erudite glass manufacturer for the catering industry, because they can round off the dining ambience and accentuate the tone of other drinking glassware on a dinner table with their design and elegant shape. RONA offers the widest range of these products, including affordable yet professionally crafted machine-shaped products, and durable and elegantly shaped pieces made using traditional hand-crafting technology, with each product bearing the touch of a human hand and the hallmark of virtuous glassmaking. Our solidly sculpted carafes, designed to decant the choicest of wines, are in a world of their own. They are unique masterpieces created under the hands of selected glassmaking maestros in an almost ritualised production process.

A privileged place is reserved for these products on the most luxuriously laid tables.

RONA is a rare example of a glassworks where the machine made production is accompanied by the handmade section. This fact gives RONA a unique opportunity to complete the professional glass assortment with hollowware not only produced by machine, but also with the more resistant handmade decanters and pitchers coming from its own production.

attention to the detail.

accessories

Seemingly unimportant small items designed to promote and elevate the culture of dining to an art form sometimes give the impression that they are throwaway products made of materials less refined than glass. Nothing could be further from the truth. Lids, small centrepieces, mise en bouche bowls and aperos bowls put the finishing touch to any dinner table or banquet buffet and lift them to a new level. These small products allow chefs to fully articulate their skill and inspire them to take new approaches in how they present their creations.

Without these small items, whose significance is so easy to underestimate, no table would be perfect.

cloches / dome

While cloches were originally designed to protect seedlings from the cold and frost, they now bring the art of food presentation to a new level of sophistication and elegance. Each cloche, designed from the bowls of RONA wine glasses, boasts brilliance and clarity, while enticing diners with delectable morsels worthy of such a display. Paired with the perfect plate or tray on their own or in sets, RONA Cloches will create an unforgettable dining experience!

— Filling marks available as shown in the pricelist/on demand

From classic cocktails to mixed drinks and savoury snacks, RONA's bar assortment allows mixologists to serve up innovated concoctions from classic to modern.

calibrating.

Naturally, calibrating is commonplace for any glassworks with any ambition in the hospitality industry. RONA provides calibration according to the European Union regulations either by laser etching, screen printing or sandblasting, according to the client's preferences and needs.

decoration.

RONA's position among other glass manufacturers is unique also owing to an unusually large assortment of decorating techniques, enabling RONA to offer an incomparable range of personalisation options which enhance the perceived value of the glassware. Realizing the importance of personalization in the hospitality industry, RONA can proudly offer a solution for practically every demand in this respect, from simple silk-printing to sophisticated acid etching or special decal sandblasting. RONA can execute even very limited series of decorated product, making this option accessible truly for any client. Tested by time, these decorating techniques are the ones most commonly used in the hospitality industry.

sandblasting

A perfectly dishwasher safe, permanent decorating technique, highly popular within the hospitality industry. The traditional way to sandblast is to put a rubber mask over the areas to remain clear and then to literally "blast" the glass surface with sand, achieving a delicate, matte execution. When the mask is removed the design remains. For more intricate patterns, RONA can offer using decals as the template, resulting in a very delicate execution which better corresponds to the high quality level of the RONA glassware.

colouring the glass

Because RONA only melts clear glassware, colour must be added in other ways. RONA has skilled painters who can paint the bowls of stemware, barware, or even accessories with transparent luster colours. Another common technique is to spray the glassware with organic colour. In this case there is a very wide range of colours available, from transparent execution to rich hues. Colours are safe and have passed testing for the USA/Prop 65.

diamond engraving

The machine version of grey cutting. Because of this the cutting will have a matte, or frosted appearance. The design is engraved using a tiny diamond wheel on a small arm controlled by a computer. It is possible to do very rich patterns and diamond engraving also works well for very modern designs. Dishwasher safety is guaranteed.

pantograph etching

It is an interesting process, and highly unique, providing a totally dishwasher safe decoration. The result is a very fine, polished, needle etching. The designs can be extremely intricate, very light and airy, with an old world charm. Because the etching is done by acid it will always be clear just as in the case of polished cuts.

screen printing

Mostly used for logo application, screen printing is widely used by our clients as an affordable, very flexible and effective way of dishwasher resistant personalization of the product. RONA can offer screen printing in different colours as well as colour combinations.

2serve

glass care.

Wash glass in proper dishwashing racks for glassware, separately from other product, such as china or flatware. Place and remove glasses from the racks one by one.

Use detergents optimal for glass; try to avoid using detergents with highly aggressive hydroxides, such as NaOH/KOH.

When polishing, use microfiber towels, hold the wine glass by its footplate and polish first the base, then the bowl. Be careful not to twist the base too violently against the cup as excessive twisting may result in breakage, even in the case of polishing such a resistant product as the RONA professional glass.

Best washing temperature for RONA glass is 60°C/140°F, rinsing 65°C/149°F. Washing time shall be around 90 s, optimally in a dishwasher using full-area washing system.

After dishwashing open the door and let the heat and steam escape, leaving the glasses to cool and dry naturally.

Try to avoid direct contact of the glasses during the washing process, storing, such as in the bar overhead storage compartments, or picking up the glasses in bouquets.

Do not pour boiling liquids into the glasses; RONA glass is not borosilicate or heat-resistant glass.

Do not heat the glasses in a microwave oven – it is not microwave oven safe.

Check your glassware regularly to protect your customers from any inconveniences; small and dangerous chipping may occur on every glass, no matter how improbable it is in the case of the RONA professional glass.

standing by.

professional customer care

Customer satisfaction is in the hands of a team of experienced professionals who focus exclusively on the catering sector using progressive communication technologies and our worldwide network of distribution partners. In addition to the standard range, we also offer customised solutions built to customer specifications using state-of-the-art machine technology and traditional manual glass processing.

customisation

Using a wide range of decorating techniques, the entire range can be decorated in line with the customer's needs and designs. We have all the standard decorating equipment in this field, both modern and traditional, including advanced laser calibration equipment.

logistics services

We have our own extensive modern logistics facilities with a capacity of up to 30,000 pallets. We work with leading couriers and offer all the usual logistics solutions the customer may require.

continuous availability of a complete range of glass for use in catering

Our entire catalogue range is continuously available from a large storage facility. Deliveries to customers in user-friendly quantities and sample shipments.

guarantee of subsequent availability of goods after their end-of-life

We guarantee availability of goods for up to two years after their retirement from the standard range. We notify customers well in advance when we make changes to the range.

NEVERENDING PASSION

JRE is the association that brings together the youngest and most reputable chefs of haute cuisine, united by a love for cooking and a desire to share experiences and values. A reality founded on research, excellence and continuous exchange as a source of growth. Born in France in the mid-seventies, it has more than 350 affiliated restaurants, scattered over 15 countries, representing as many culinary experiences and interpretations: Austria, Belgium, Croatia, Denmark, Germany, France, Ireland, Italy, Luxembourg, Holland, Poland, Slovenia, Spain, Switzerland and the United Kingdom. The Italian team, now made up of 78 chefs, is led by chef Filippo Saporito, owner of the La Leggenda dei Frati restaurant in Florence.

JRE-Italia partners with RONA2serve, one of the most prestigious glassworks in the world, to create something truly exclusive: a glass capable of distinguishing itself from all the others on the market. Unique and refined, it has been studied by some of the Association's sommeliers and by RONA to best represent the values of JRE. One of the most valuable aspects, which allowed its creation, is the mouthblown production system with which RONA, still today, creates some of its collections. Lightness, transparency and elegance, all in a single glass.

ALMA
THE SCHOOL OF ITALIAN CULINARY ARTS

ALMA - The International School of Italian Cuisine is recognised as the world's leading educational and training centre for the Italian food and beverage and hospitality sectors at an international level. ALMA trains cooks, pastry chefs, bakery chefs, pizza chef, gelato artisans, sommeliers, professional waiting staff and restaurant managers. ALMA is based in the heart of the Food Valley, in the beautiful Ducal Palace of Colorno: we are a few kilometres from Parma, proclaimed a UNESCO Creative City of Gastronomy in 2015, in recognition of its heritage of PDO and PGI delicacies and culinary specialties.

RONA2serve is honored to be a technical partner for ALMA in 2024-2025.

The glassworks

We are RONA

RONA has a strong export position, qualified personnel and the most modern technologies. The glassworks in Lednické Rovne, Slovakia is one of the world's leaders in processing of lead-free crystal glass.

The glassworks is trading with a wide range of customers from all over the world and provides them with activities related to the development, production and servicing of beverage glass for households, hotels and restaurants as well as for the airlines and cruise ship companies. Machine made, handcrafted goblets and beverage glasses are covering the basic position in the company's product range.

96% of production is exported and is available in more than 80 countries world-wide. The yearly production of the company exceeds 60 million pieces.

Tradition

SINCE 1892

More than 130 years of tradition

The glassworks was founded in 1892 by the entrepreneur Jozef Schreiber as the last and the largest glassworks of the Viennas company Schreiber und Neffen, which had the most modern technical equipment for its time. The glassworks in Lednické Rovne is the most successful Slovak glassworks in history.

History timeline

- **1892**

Establishment of the glassworks by entrepreneur Jozef Schreiber. It became part of his company Schreiber und Neffen (Schreiber and Nephews).
- **1893**

Launch of pressed (KAISER CRYSTAL) and hand-blown glass (RONA CRYSTAL) production.
- **1896**

Import of the first pantographs, which began to be used for unique glass decoration.
- **1897**

Transformation of the business into the company Sklené huty, formerly Schreiber and Nephews.
- **1918**

Expansion of the production range to lampshades (cylinders) for oil lamps. They were sold under the brand "fine and branded".
- **1941**

Through arization, the glassworks came under the company Stölzle Glasindustrie Aktiengesellschaft.
- **1942**

Independence of the glassworks under the name Slovenské sklené huty, formerly Schreiber and Nephews.
- **1946**

Nationalization of the glassworks, which became part of the state enterprise Slovenské sklárne, n.p. (since 1953 United Glassworks, n.p.).
- **1947**

Outbreak of a fire resulting in serious damage to production premises. Recovery took a year and limited production.
- **1956**

Introduction of the unique technology of pulled stem into serial manual production.
- **1957**

Establishment of the art-technical department in our glassworks.
- **1959**

Glass designer Karol Hološko received an award of honor at the glass exhibition at the Corning Museum of Glass in the USA.

- **1963**

Completion of the gasification of the glassworks.
- **1981**

Launch of the first automatic line for the production of beverage glass.
- **1992**

Transformation of the company into a joint-stock company LR Crystal, a.s..
- **1992**

Organization of the first international glass symposium.
- **1996**

Launch of the automatic forming line for the simultaneous production of goblets and cups.
- **1998**

Change in glass composition to lead-free crystal glass.
- **2001**

Introduction of the technology of pulled stem by double blowing into automatic machine production.
- **2003**

Completion of the structural changes process, resulting in the establishment of the joint-stock company RONA, a.s..
- **2008**

Introduction of the unique laser technology for hot processing of rim edges of goblets.
- **2016**

Introduction of automatic quality inspection in machine production.
- **2018**

Launch of automatic production of ultrathin (ultralight) products, matching the quality of hand-made production.
- **2023**

Extensive reconstruction of buildings as part of the energy efficiency reduction project.
- **2024**

In 2024, RONA completed the construction of a photovoltaic power plant (FVE) that will supply electricity for the company's own use. RONA has also joined a project focused on the modernization and increased efficiency of melting units.

RONA glassware

Scan and play video
Resistance test

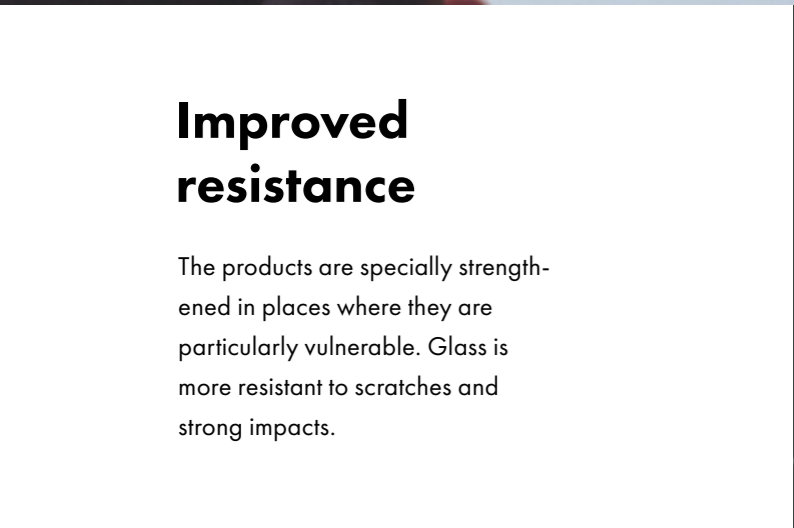

Environmentally friendly

The special RONA crystal glass composition doesn't contain lead or any other pollutants or toxins. This makes it safe for your health.

Design and sound

RONA glass is fragile, with unambiguous sound, as brilliant as a diamond. You will discover its beauty at first sight and your lips will touch the essence of the glass art.

Improved resistance

The products are specially strengthened in places where they are particularly vulnerable. Glass is more resistant to scratches and strong impacts.

Brilliance and clarity

Infinite transparency without milk coating is guaranteed by the use of a rare element of the highest quality erbium, used by only a few world producers.

Dishwasher safe

The special and unique glass composition ensures 1000 cycles in the dishwashers with long lasting brilliance.

TOP QUALITY GLASSWARE

RONA products and quality rank the glassworks among the world's leading manufacturers of the table top glassware.

Environmental responsibility

More information in our
Green Book

Reduction of energy consumption

The main goal of RONA, a.s. in energy consumption, is a constant reduction in energy consumption, mainly natural gas. Therefore, the company decided to modernize melting units and include reduction of natural gas consumption in its investment plan, that by 2030, all melting units will melt enamel using electricity either fully, or at least by 50%.

Reduction of greenhouse gas production

RONA will also contribute to the reduction of greenhouse gas emissions and the reduction of dependence on the import of electricity, through the use of renewable energy sources, specifically solar energy. In 2024, RONA completed the construction of a photovoltaic power plant (FVE) that will supply electricity for the company's own use.

Reduction of waste and wastewater generation

Part of the production processes has a water circulation system, where only the necessary amount of water is allowed to evaporate or float on the products. The water used to cool the equipment is treated and cooled in the cooling circuits and subsequently cools the necessary equipment again.

RONA recycles 98% of internal glass shards

RONA recycles 98% of internal glass shards in the melting process. Shards that are not used within the company are handed over for further recycling in the melting process at an external company. As part of recycling, RONA also recycles other types of waste such as paper, plastic and metal waste.

Modern processes

Qualified staff members, right motivation and managing the demanding technologies are the basic principles of RONA's recent success story. It does not concern only application of modern processes for glass making, but also regular improvements of all phases of the production processes with the aim to achieve the best execution of the finished products. At the same time RONA's production complies with the EU environmental legislation.

Machine made

Pulled stem technology

In 2001 RONA introduced, as the first company in the world, technology of the so called “pulled stem” into the blow - blow process.

This process creates a monolithic product from the original two – piece process. There are no weak points where stem are joined with bowls and it significantly enhances its mechanical resistance and thus durability. RONA nowadays owns automatic technology processes which simulate handmade production and create products of high quality. In addition RONA has low tooling costs for pulled stem technology and large portfolio of ready molds.

Success brings motivation and a challenge for further advancement and development, not only in technology but also in overcoming obstacles in a professional and expert manner. Today’s master glassblower replaces the traditional glassblowing pipe with a complex technical mechanism and through its optimal configuration, gives life to the glass that is indistinguishable from a hand-blown goblet.

RONA owns seven modern and automatic production lines

MODERN TECHNOLOGIES

Our products represent an exciting combination of elegance and technology in addition to creative design, fine cold – cut rims and beautifully drawn stems that are synonymous with RONA glassware.

500 million pulled stem production

Year 2025 was a monumental milestone for our company: the production of 500 million pulled stem pieces! This achievement is a testament to the hard work, dedication, and innovation that our team has put into every product we create. Reaching this number isn't just about quantity; it's a reflection of our unwavering commitment to quality and precision. Each piece represents the expertise and passion of our employees, as well as the trust our customers place in us.

Ultralight glassware

Year 2018 brought another world's first in the form of ultralight machine made stemware, which was introduced by RONA and provides quality and properties of hand made products, however, made by the machine, hence the expression "Hand made by machine". Thin-walled and ultralight weight goblets with pulled stem and superior design - embodying all the elements of handcrafted glass. The unique technology, combined with expertise and passion, brings a new dimension to the range of glass products - a machine made product with the quality and properties of hand-blown glass.

RONA

6 pieces in package

The Gala glassware collection, a RONA staple for almost 30 years, has been upgraded with a modern "pulled stem" design. This new design improves durability, with better breakage resistance, and offers a more seamless, elegant look by integrating the foot into the chalice, enhancing both strength and aesthetics.

The amazing clarity and longevity
due in large part to the unique
platinum glass process

Clarity and longevity

The traditional choice for water, glass is durable, non-reactive, and doesn't affect the taste of the water. These glasses often come in classic forms like tumbler-style or highball glasses, and are prized for their clarity and longevity. They can also be easily washed and are dishwasher-safe.

Luxury that you can have on
hand every day and enjoy
it's close presence

Brilliant and diamond

The RONA cut glass has a clearer and more "brilliant" appearance. There is a vast difference in clarity and brilliance between cut glass and pressed glass. Cut glass is always more valuable than pressed glass. Listen to the glass. When you gently thump a piece of RONA cut glass it will ring and sing back to you. Pressed glass does not make a ringing sound.

Modern glass bowls are versatile and elegant, ideal for serving fruit or vegetable salads, preparing dishes and desserts, or adding a tasteful decorative touch to any table.

The right glassware
helps enhance the
aesthetic appeal

Glassware for beer

Glassware for beer plays a significant role in enhancing both the sensory experience and the overall enjoyment of a beer. The shape, size, and design of a beer glass can influence how the beer looks, smells, and tastes. The right glassware helps enhance the aesthetic appeal by showcasing the beer's color, clarity, and carbonation. More importantly, it improves the olfactory experience by funneling aromas toward the nose, which is crucial for fully appreciating the complexity of the beer's flavors.

Decorative techniques

RONA glassworks is capable of using an almost unlimited variety of decorating techniques to embellish the clear glass. Such as pantograph etching, diamond cutting, hand painting of metallic rims (gold and platinum), hand painting of luster colors, spraying of organic colors, sand blasting, screen printing, and applying decals. Our decorations open new opportunities and markets.

More information about
Decorations

Pantograph etching

RONA is proud to be the 1st factory in central Europe where the pantograph machines were installed – back in 1896. Pantograph remains one of the most challenging techniques for glassware decoration. First, an experienced craftsman must apply wax onto the product and then use a system of needles to draw the desired pattern. The cup is then inserted into an acid bath which finishes the process. The product can be further decorated, for example by adding a gold finish, or by coloring.

D31057/67

D31460

D31463

D31462

Diamond engraving

Engraving is done by a diamond mounted on a small disc. The product is placed under a stream of running water and the diamond is used to engrave elegant shapes and patterns onto glass surface. Although diamond is the hardest element in nature, our specialists are able to cut the glass in soft, smooth lines.

Painting and combinations

Handpainting of metallic rims and bands of varying widths as per your request. A form of liquid gold or platinum is used. Hand painting with luster colors on the bowls of the stemware or barware. Large color palette available to choose from.

D28711

D30086

D30084

D30085

Screen printing technique

Color screen print decorations, located on the foot or on the bowl of a stemmed glass, or on the bottom or side of a tumbler, are ideal for your private branded corporate gifts. Ideal solution for your custom tailored decorated projects.

Machine and hand cutting

RONA offers a wide range of both, machine cutting and hand cutting capabilities. The range of cuttings includes traditional and contemporary designs. The cuts can be either polished and/or grey cuts in order to fully enhance brilliance and clarity of the glass. Cut glass is always more valuable than pressed glass.

Spraying

This technique is commonly used to create gradient or ombre effects on the glass, giving it a unique and artistic appearance and accommodate a wide range of shades and color types. Transparent, matt, shiny or metallic, RONA's spraying method can do it all. Overall, the spraying method of decorating wine glasses can be a fun and creative way to add a unique touch to your glassware collection.

NEW * In 2024, RONA acquired automatic spraying machine.

Sandblasting

Glass sandblasting is a technique used to carve designs into the surface of glass using a high-pressure stream of sand or other abrasive materials. This technique is often used to create intricate designs, patterns, or lettering on glass objects. To sandblast glass, the surface of the glass is first cleaned and then covered with a stencil or masking tape that has the desired design cut into it. The exposed areas are then blasted with the abrasive material, which erodes the surface of the glass and creates a frosted or etched effect in the design.

Other techniques

3D laser engraving^{NEW}

Once your logo is programmed into the engraving machine, the laser converts light energy into heat, and directs that onto your item. Use laser engraving for your detailed logo, or in conjunction with other decoration methods.

Pad printing

Also called tampography or tampo printing, is typically used for applications where print quality, precision or a complex shape are involved. It is cost-effective, provides multiple color options and delivers detailed, high-quality image on your glass.

Calibrating

Naturally, calibrating is commonplace for any glassworks with any ambition in the hospitality industry. RONA provides calibration according to the European Union regulations either by laser etching, screen printing or sandblasting, according to the client's preferences and needs.

Decal

Is a decorative technique by which engravings and prints are transferred onto your glass. Decal is a special technique, which can make the decoration vivid and enduring.

Shapes suitable for cutting

RONA offers a wide range of both, machine cutting and hand cutting capabilities. The range of cuttings includes traditional and contemporary designs. The cuts can be either polished and/or grey cuts in order to fully enhance brilliance and clarity of the glass.

TRADITION

The glassworks was founded in 1892 by the entrepreneur Jozef Schreiber as the last and the largest glassworks of the Viennas company Schreiber und Neffen, which had the most modern technical equipment for its time. The glassworks in Lednické Rovne is the most succesful glassworks in Slovak history. The production range of the glassworks was very wide and diverse from the beginning. It contained historicizing, often richly decorated pieces, while in the era of Functionalism, simple elegant cups and shapes were developed, predominantly made of clear smooth glass, which were in full compliance with the principles of this minimalist style.

The glassworks is trading with a wide range of customers from all over the world and provides them with activities related to the development, production and servicing of beverage glass for households, hotels and restaurants as well as for the airlines and cruises. Machine and hand-crafted goblets and beverage glasses are covering the fundamental position in the company's product range.

DESIGN BY

Patrik Illo is the Lead Designer and Visual Artist at RONA, a.s., he focuses on glass design, experimental design, creation of objects and installations. Since 2010 he has been the Director of the Studio of Glass at the Academy of Fine Arts and Design in Bratislava. He has won several design awards, and his works have been presented at 40 individual exhibitions and more than 100 joint exhibitions in Slovakia and abroad, as well as being published in various magazines.

DECANTERS

RONA handmade decanters are high-class models in both form and function. The stylish decanters with precisely defined curves of the body are ideal for aeration of your wine, as they offer a wide surface area for the wine to be exposed to oxygen after decanting. These wine decanters have a slanted spout for easy pouring and a narrow neck fit to handle. Lightweight, lead-free crystal makes them the perfect decanters to hold and to pour from. Entertain your guests with RONA elegant wine decanters.

GLASS CARE

1

Always clean your glasses carefully, ideally by hand. Wash your glasses thoroughly, inside and out, using hot but not boiling water. The glasses should then be rinsed with clear water. Best washing temperature for RONA glass is 60 °C / 140 °F.

2

Allow your glasses to air dry right side up, or hand dry them using lint-free or microfiber towels. When drying by hand hold by the bowl and rotate the cloth gently.

3

The glasses are dishwasher safe but we recommend using mild, unscented detergent, the lowest heat setting on the machine and glasses must be stored tightly in dishwasher.

4

At the end of the dishwashing cycle open the door to let the heat and steam escape, leaving the glasses to cool and dry naturally.

5

Our glassware products are not suitable for use in microwave ovens, and should not be used for serving hot beverages as RONA glassware is not heat-resistant.

6

Handle the products with care to avoid damage or injury, and do not allow children to play with glassware.

PACKAGING

By presenting RONA glassware range in an elegant gift box, you'll be sure to make an unforgettable impression. A thoughtful and timeless keepsake gift such as this, is most definitely a winner. Securely fitting gift box will allow for a wonderful surprise upon opening, and the practical magnetic closing lid with ribbon complements the functional gift box. Gift box includes a tailored insert, making this a secure glassware gift ready-to-ship. And it goes without saying the packaging is eco-friendly, which means that it is recyclable, compostable and reusable.

SUSTAINABILITY

We are well aware of our role and responsibility in the ecological value chain, and we strive to improve our performance continuously. For RONA, the concept of being consistently sustainable means focusing holistically on environmentally friendly processes and social working conditions. To us, sustainability is about responsibility. The integration of sustainability requirements is focused on key topics such as resources, suppliers, production, transportation, recycling. RONA special glass composition known as crystalline declared by the standard 69/493/EEC Crystal Directive guarantees it is free of lead, doesn't contain any polluting additives and toxins, using only certified raw materials. Safe for your health, children and environment.

Sustainable ecological balance is ensured through 100% recyclable process, caused by endless inclusion of used glass to our recipe for glass production. Trust a material whose history is over 5000 years in the making. Not only our products are sustainable. We are also continuously working on making our packaging as sustainable as possible. RONA PREMIUM boxes, labels, cards and catalogues are printed with compostable inks on recycled materials, giving a second life to materials that are already in circulation. We have identified the following three fundamentals which assist us in developing and improving our sustainable packaging range: compostable, recyclable, reusable.
